Ideal forecasting table preview

Table 1: Averaged forecasting results for the ideal FARFIMA setting with $T = 1000$ under the expanding-window scheme. The FARFIMA$(1, 1, 0)$ model is used as the benchmark. The smallest RMSE within each setting is highlighted in red, the smallest MAE in blue, and the smallest WIS in purple. WIS combines the 80% and 95% prediction intervals.

			RMSE		MAE		WIS
